Lightweigh plastic handles to increase grip surface :
- Provides cramp free, natural holding positions and sensitivity
- Round cross-section of the instrument provides an easy and smooth rotation.Expands the working and application area.
- Retention profile with pin ensures safe griping.
- Ergonomic, light weight plastic handle provides fatigue free,optimal usage.

Lightweigh plastic handles to increase grip surface:
- Provides cramp free ,natural holding positions and sensitivity
- Round cross-section of the instrument provides an easy and smooth rotation.Expands the working and application area.
- Retention profile with pin ensures safe griping.
- Ergonomic, light weight plastic handle provides fatgue free, optimal usage.

Needle holders with carbide inserts.
The carbide insersts on needle holders can be selected basea on usage.
Needle holders with carbide inserts have four different surface types. Smooth surface and there different notched surfaces provide approprlate needle catch.

smooth

0.2

0.4

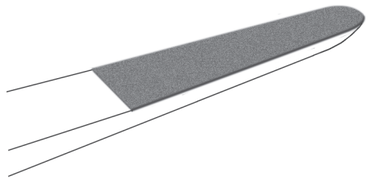

0.5

With smooth jaw surface for suture materials: 9/0 - 11/0

With 0.2 mm pitch of serration for suture material: 6/0 - 10/0

0.4 mm pitch of serration for suture material: 4/0 – 6/0

0.5 mm pitch of serration for suture material: up to 3/0

DiaPowder jaws provide harder and more wear resistant surfaces.
DiaPowder jaws ensure reliabe grip of fine needles, sutures and tissues.

Needle holders with carbide inserts.
The carbide insersts on needle holders can be selected basea on usage.
Needle holders with carbide inserts have four different surface types.
Smooth surface and three different notched surfaces provide appropriate needle catch.

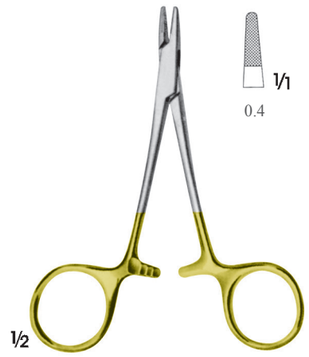

With smooth jaw surface for suture materials: 9/0 - 11/0

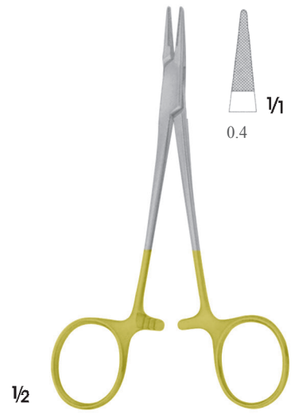

With 0.2 mm pitch of serration for suture material: 6/0 - 10/0

0.4 mm pitch of serration for suture material: 4/0 – 6/0

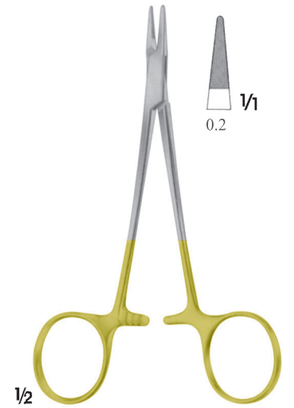

0.5 mm pitch of serration for suture material: up to 3/0

TWS 5909

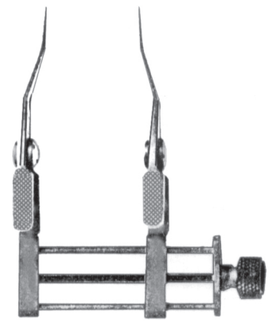

For micro vessel anastomosis
- Safe and careful griping of vessel.
- Blades with serrated blade surface
- Pressure adjusment with use of key

BIEMER
TWS 5910

Safe adaptation of nerve anastomoses

- Piercing the nerve center with fine needles that prevents strong pathological changes
- Changeable needles with use of key.

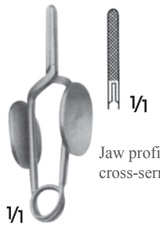

TWS 5911
Approximator

For micro vessel anastomosis
- Safe and careful griping of vessel.
- Blades with serrated blade surface.
- The ability to manually set the pressure.
- Distance, zoom in and out manually.

Forceps for changing the blades
13 cm

Retractor system for optimal approach to the arteria iliaca communis.
The retractor blades are made out of titanium and therefore they are radiotransparent. The big medial retractor blade can be gradually adjusted during the operation. Because of the blades which are easy to exchange the retractor system can be used for the left and the right side.

TWS 8540
Ø 4.8 mm
Forceps for grasping the glans and the foreskin
12 .5 cm

TWS 8541
Fixation clamp for the spermatic cord
14.5 cm

- Foreskin is pushed over the bell-shaped proctection rod with the help of two hemostatic or ligature forceps and the glans is placed into cavity on the rod.
- In this position, wing nut is tightened as close as possible for guaranteeing annular copression on the foreskin. Then foreskin is cut off with scalpel, right next to the compression ring.
- The circumcision clamp is kept in compressed position for few minutes for avoiding bleeding. In case of large vein of frenular artery is cut artrey is cut through, the ligature set should be kept ready.
- The advantage of the method described is aesthetically favorble scar after opretion.

More reliable grip on the tissue due to ‘hooking’ effect.
Wide angle of opening.
Smooth, steady cut.
Specimens are not squashed.
Not painful; self-wound, heals well.

Function:
The vacuum required can be constantly preset by the adjusting screw. This vacuum exists then up to the closed quick-shutter, thus the vacuum in the suction head is pressed from the left to the right, the nounted suction head is immediately put under the preset vacuum. In case the preset vacuum has to be changed, this can be done with the adjusting screw. For immediate removal of the suction head simply close the quickshutter, thus the vacuum in the suction head is eliminated at once whereas the vacuum in the suction jar remains unchanged.

Valve Retractor System

- The low operating platform provides freedom for surgeon movements in operation area.
- Strong fixation of accessories and hooks and excellent application combined with fast connection comfort.
- Carriers, can be fitted or fived in any position on the arms and distinctive bars.
- The new deep-valve design of retractor is optimized to work on patients with deep rib cage.

The slight curvature of the introducer forceps permits handling during tunneling. Here the prosthesis can be drawn in by applying the introducer forceps directly to the prosthesis (alloplastic prosthesis) or can be drawn in by means of the bulldog
clamp (autologous/homologous prostheis). Thanks to the interlocking fit, the bulldog clamp rests non-displaceable and securely in the mouth of the introducer forceps.
